**CLAIMS SECTION SHOWING MARKED UP CHANGES 09/114,668**

1. (Amended) A circuit arrangement for controlling audio signal transmissions for a communications system that includes a microphone and a video camera, comprising:
  - a video processor configured and arranged to receive a video signal from the video camera, detect movement of an object in the video signal, provide a motion-indicating signal indicating movement relative to the object; and
  - an audio processor coupled to the video processor and configured and arranged to modify and mute the audio signal to be transmitted responsive to the motion-indicating signal.
  
13. (Amended) A method for audio signal and video signal processing, comprising:
  - receiving a video signal from a video camera;
  - receiving an audio signal from a microphone;
  - detecting movement of an object in the video signal;
  - providing a motion-indicating signal to an audio signal processor when movement of the object is detected;
  - modifying the audio signal in response to the motion-indicating signal; and
  - providing a muted audio signal when no motion is detected.
